

Copernican Principle

Demolished by NASA's WMAP &
Hubble Deep Field Observations –
Center of Universe Located

Charles Sven
April 16, 2010

What is the Copernican Principle ?

- **“The Copernican principle states that the Earth is not the center of the universe, and that, as observers, we don’t occupy a special place.”**
<http://www.physorg.com/news130673436.html>
- The Copernican Principle is a basic statement in physics that there should be no “special” observers.
http://abyss.uoregon.edu/~js/glossary/copernican_principle.html
- *NOTE:* This Copernican principle is an assumption without any more support than that given to the FLAT Earth concept.

- *NASA's Deep Field Studies*

- These studies find a space, a 25 billion light year, galaxy filled, *space* between the far galaxies seen in NASA's north and south deep field observations.
- This galaxy filled view can only be supported by a unique viewing location found in the center of our visible universe. This center/epicenter is due to a [Dark Energy powered] Big Bang Explosion IN SPACE. For applied physics see: <http://www.allnewuniverse.com/DemoOfDarkEnergy.pdf>
- Very slow moving earth places Earth right next to epicenter. See references given on slide 6.
- *Next slide* depicts all the above using only NASA observations.

NASA's Hubble Ultra deep field north *HUDF09* & south *HDF-S* studies

Distance across *HUDF09* to *HDF-S* is approximately 25 Gly

13 Gly *HUDF09*
12/8/09

Center of our Universe - EBB

The only possible explanation for our unique view of Hubble's deep fields and galaxy filled space requires that this is seen from a very slow moving earth located right next to the epicenter [*EBB*] of the Big Bang Explosion IN SPACE that was powered by *Dark Energy*.

See next slide for references

Galaxies in North field HUDF09

Gly = billion light years

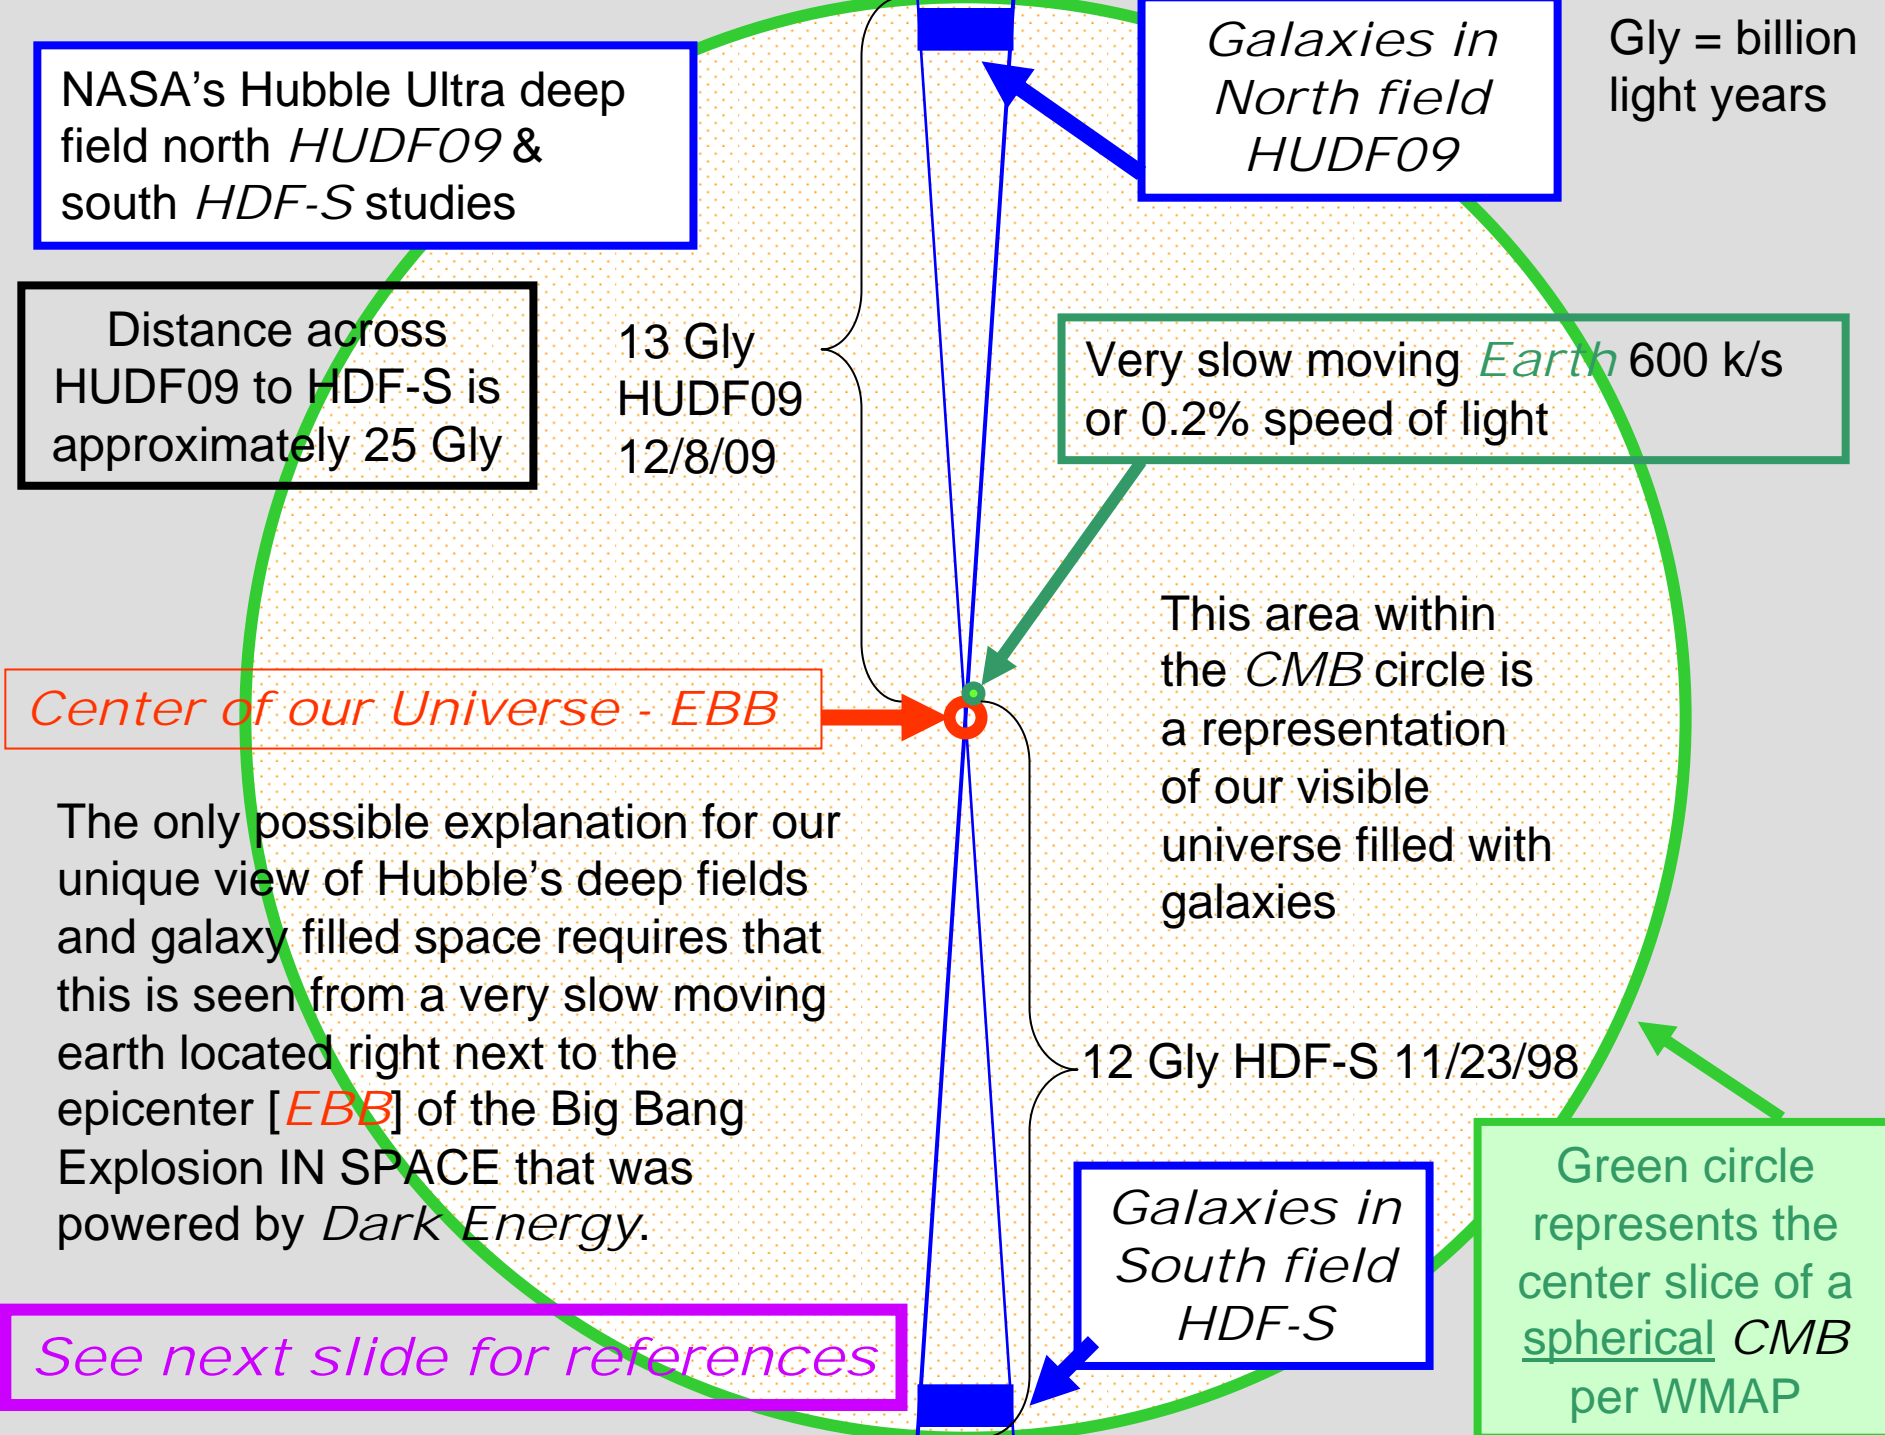

Very slow moving *Earth* 600 k/s or 0.2% speed of light

This area within the *CMB* circle is a representation of our visible universe filled with galaxies

12 Gly *HDF-S* 11/23/98

Galaxies in South field HDF-S

Green circle represents the center slice of a spherical *CMB* per WMAP

- *Earth* is very slow moving, see supporting data from *NASA* titled:
- **CMBR Dipole: Speeding Through the Universe** “The map indicates that the Local Group moves at about 600 kilometers per second [= **0.2% of speed of light**] relative to this primordial radiation. This high speed was initially unexpected and its magnitude is still unexplained.” Repeated 8 times at apod:

- <http://www.allnewuniverse.com/atoms-power-requirements.html>

Conclusion

- Very slow Earth, and related local galaxies, are located right next to the Center/Epicenter of our Universe created by a Dark Energy powered Big Bang Explosion IN SPACE.
- Earth is some 0.2% of the radius away, approximately 60 million light years distant from the Center/Epicenter.
- This changes the age of the Universe to about 28 billion years [Round trip of matter out 13.7+Gy and CMB radiation return is 13.7Gy at the speed of light = 27.4+ Gy [billion years] see : <http://www.allnewuniverse.com/DemoOfDarkEnergy.pdf>

Other Supporting Evidence

- Quasar chart <http://www.2dfquasar.org/wedgeplot.html>
- Earth is in the very dead center of this CMB sphere and the CMB is 13.7 billion light years from Earth in every direction.
